

TORELLI THEOREMS.

TOMÁS GÓMEZ

ABSTRACT. The classical Torelli Theorem says that we can recover a smooth projective curve from its polarized Jacobian. The analogous statement also holds for the moduli space of stable vector bundles (Mumford-Newstead and Narasimhan-Ramanan). In this talk we report on a series of articles where we prove Torelli type theorems for other moduli spaces (joint work with Biswas, Hoffmann, Logares and Muoz).
