Historical aspects

 $\boldsymbol{\Lambda}$ was introduced by Einstein

Nerst (1916) and Pauli discussed the possible contribution of zero-point energy to the density of the Universe $(\rightarrow \text{Kragh arXiv:1111.4623})$

Historical aspects

 $\boldsymbol{\Lambda}$ was introduced by Einstein

Nerst (1916) and Pauli discussed the possible contribution of zero-point energy to the density of the Universe $(\rightarrow \text{Kragh arXiv:1111.4623})$

Lemaître (1934) made the comment that Λ is equivalent to a Lorentz invariant non-zero vacuum, i.e.

$$p = -\rho$$

Historical aspects

 $\boldsymbol{\Lambda}$ was introduced by Einstein

Nerst (1916) and Pauli discussed the possible contribution of zero-point energy to the density of the Universe $(\rightarrow \text{Kragh arXiv:1111.4623})$

Lemaître (1934) made the comment that Λ is equivalent to a Lorentz invariant non-zero vacuum, i.e.

$$p = -\rho$$

So is this the origin of the acceleration ?

Historical aspects

No!

Alain Blanchard DISCUSSIONS (with controversies if possible...)

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・

æ

Historical aspects

No!

The Vacuum catastroph (Weinberg, 1989):

$$ho_{
m v} = \langle 0 | T^{00} | 0
angle = rac{1}{2(2\pi)^3} \int_0^{+\infty} k \, {
m d}^3 {f k}$$

highly divergent.

문 문 문

Historical aspects

No!

The Vacuum catastroph (Weinberg, 1989):

$$ho_{\mathbf{v}} = \langle 0 | T^{00} | 0
angle = rac{1}{2(2\pi)^3} \int_0^{+\infty} k \, \mathrm{d}^3 \mathbf{k}$$

highly divergent :

$$ho_{
m v}(k_c) \propto rac{k_c^4}{16\pi^2}$$

문 문 문

Quantum Vacuum contribution A new scenario

Equation of state

The pressure:

$$p_{v} = (1/3) \sum_{i} \langle 0 | T^{ii} | 0 \rangle = \frac{1}{3} \frac{1}{2(2\pi)^{3}} \int_{0}^{+\infty} k \, \mathrm{d}^{3} \mathbf{k}$$

・ロト ・日下・ ・日下

ヨト ヨ

Equation of state

The pressure:

$$p_{
m v} = (1/3) \sum_{i} \langle 0 | T^{ii} | 0
angle = rac{1}{3} rac{1}{2(2\pi)^3} \int_{0}^{+\infty} k \, \mathrm{d}^3 \mathbf{k}$$

So that any regularization that is applied to both quantities leads to the e.o.s.:

Э

Equation of state

The pressure:

$$p_{
m v} = (\mathbf{1}/\mathbf{3}) \sum_{i} \langle 0 | T^{ii} | 0
angle = rac{1}{3} rac{1}{2(2\pi)^3} \int_{0}^{+\infty} k \, \mathrm{d}^3 \mathbf{k}$$

So that any regularization that is applied to both quantities leads to the e.o.s.:

$$p = \frac{1}{3}\rho$$

Equation of state

The pressure:

$$p_{v} = (1/3) \sum_{i} \langle 0 | T^{ii} | 0 \rangle = \frac{1}{3} \frac{1}{2(2\pi)^{3}} \int_{0}^{+\infty} k \, \mathrm{d}^{3} \mathbf{k}$$

So that any regularization that is applied to both quantities leads to the e.o.s.:

$$p = \frac{1}{3}\rho$$

i.e. eq. (1) + eq. (2) leads to :

$$p_v = \rho_v = 0$$

Equation of state

The density and pressure can be computed by dimensional regularization. Still diverging... but finite terms remain with the correct equation of state:

$$\rho_{\nu} = \frac{m^4}{64\pi^2} \log\left(\frac{m^2}{\mu^2}\right)$$

So is zero for a massless field. (cf J.Martin 2012)

Casimir effect

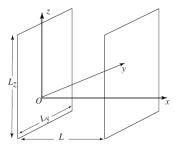

Where is there vacuum contribution in laboratory physics?

and ...

with:

 $p_{//} = ho$ Brown & Maclay (1968)

3 × 3

Casimir effect from higher dimension

Assume there is an additional compact dimension.

Assume there is an additional compact dimension.

The quantification of gravitational field modes in the bulk leads to a Casimir energy (Appelquist & Chodos, 1983).

Assume there is an additional compact dimension.

The quantification of gravitational field modes in the bulk leads to a Casimir energy (Appelquist & Chodos, 1983). This result can be established by evaluating zero mode contributions (Rohrlich 1984).

Assume there is an additional compact dimension.

The quantification of gravitational field modes in the bulk leads to a Casimir energy (Appelquist & Chodos, 1983). This result can be established by evaluating zero mode contributions (Rohrlich 1984). Dispersion relation:

$$\omega^2 = k^2 + \frac{n^2}{R^2}$$

Assume there is an additional compact dimension.

The quantification of gravitational field modes in the bulk leads to a Casimir energy (Appelquist & Chodos, 1983). This result can be established by evaluating zero mode contributions (Rohrlich 1984). Dispersion relation:

$$\omega^2 = k^2 + \frac{n^2}{R^2}$$

Cosmology: at high energy, only modes with λ smaller than ct have to be taken into account i.e.:

$$\rho_{\nu} = \frac{5\hbar c}{8\pi^3 R} \int_{\omega > \omega_H}^{\infty} k^2 \mathrm{d}k \left[\sum_{n = -\infty}^{\infty} \left(k^2 + \frac{n^2}{R^2} \right)^{1/2} \right]$$
Alain Blanchard
DISCUSSIONS

Casimir effect: the horizon

At high energy, only modes with λ smaller than ct have to be taken into account i.e.:

$$\rho_{\mathbf{v}} = \frac{5\hbar c}{8\pi^3 R} \int_0^\infty k^2 \mathrm{d}k \, [\dots] - \frac{5\hbar c}{8\pi^3 R} \int_0^{\omega_H} k^2 \mathrm{d}k \, [\dots]$$

프 🕨 🛛 프

Casimir effect: the horizon

At high energy, only modes with λ smaller than ct have to be taken into account i.e.:

$$\rho_{\nu} = \frac{5\hbar c}{8\pi^3 R} \int_0^\infty k^2 \mathrm{d}k \, [\ldots] - \frac{5\hbar c}{8\pi^3 R} \int_0^{\omega_H} k^2 \mathrm{d}k \, [\ldots]$$

However, as long as $ct \ll 2\pi R$ vacuum should be that of a massless field in a 4+1D space time i.e.:

$$\rho_v = 0$$

Isotropy ends...

when $\omega_H \sim \frac{1}{R}$, this is the last time at which symetries ensure $\rho_v = 0$. Then

$$\rho_{\nu} = \frac{5\hbar c}{8\pi^3 R} \int_0^\infty k^2 \mathrm{d}k \, [...] - \frac{5\hbar c}{8\pi^3 R} \int_0^{1/R} k^2 \mathrm{d}k \, [...] = 0$$

ヘロン ヘロン ヘビン・

문 문 문

lsotropy ends...

when $\omega_H \sim \frac{1}{R}$, this is the last time at which symetries ensure $\rho_{\rm v}=$ 0. Then

$$\rho_{\rm v} = \frac{5\hbar c}{8\pi^3 R} \int_0^\infty k^2 \mathrm{d}k \, [...] - \frac{5\hbar c}{8\pi^3 R} \int_0^{1/R} k^2 \mathrm{d}k \, [...] = 0$$

Later, when $ct\gg 2\pi R$ i.e. $\omega_{H}\sim 0$

$$\rho_{\nu} = \frac{5\hbar c}{8\pi^3 R} \int_0^\infty k^2 \mathrm{d}k \, [...] = \frac{5\hbar c}{8\pi^3 R} \int_0^{1/R} k^2 \mathrm{d}k \, [...]$$

with :

$$[\dots] = \left[\sum_{n=-\infty}^{\infty} \left(k^2 + \frac{n^2}{R^2}\right)^{1/2}\right]$$

lsotropy ends...

The condition :

$$\omega = \sqrt{k^2 + \frac{n^2}{R^2}} < \frac{1}{R}$$

ensured only if n = 0, so:

$$\rho_{\nu} = \frac{5\hbar c}{8\pi^3 R} \int_0^{1/R} k^3 \mathrm{d}k = \frac{5\hbar c}{32\pi^3 R^5}$$

$$\rho_{\nu} = \frac{5\hbar c}{8\pi^3 R} \int_0^{1/R} k^3 \mathrm{d}k = \frac{5\hbar c}{32\pi^3 R^5}$$

In the brane:

$$\rho_{\rm v} = \frac{5hc}{16\pi^2 R^4}$$

- 1

 $R\sim 25\mu{
m m}$ fits data. Corresponding to $E\sim 1\,{\it TeV}$

Conclusion

Casimir effect from quantized massless field in additional compact dimension can produce a non-zero vacuum contribution to the density of the universe with the correct equation of state for a cosmological constant.

Conclusion

Casimir effect from quantized massless field in additional compact dimension can produce a non-zero vacuum contribution to the density of the universe with the correct equation of state for a cosmological constant.

With $R \sim 25 \mu m$ it produces a cosmological constant as observed. \rightarrow gravitation is modified on scales $\leq 25 \mu m$

Conclusion

Casimir effect from quantized massless field in additional compact dimension can produce a non-zero vacuum contribution to the density of the universe with the correct equation of state for a cosmological constant.

With $R \sim 25 \mu m$ it produces a cosmological constant as observed. \rightarrow gravitation is modified on scales $\leq 25 \mu m$

Acceleration could be the direct manifestation of the quantum gravitational vacuum: w = -1

Conclusion

Casimir effect from quantized massless field in additional compact dimension can produce a non-zero vacuum contribution to the density of the universe with the correct equation of state for a cosmological constant.

With $R \sim 25 \mu m$ it produces a cosmological constant as observed. \rightarrow gravitation is modified on scales $\leq 25 \mu m$

Acceleration could be the direct manifestation of the quantum gravitational vacuum: w = -1

This would be the simplest explanation...
