

Superconducting Quantum Hardware: Materials, Fabrication and Noise

Spring School on Superconducting Qubit Technology

2023, Apr 11 -- Apr 21

Organizers:

David López-Núñez (IFAE, Barcelona)

Fabian Zwickhoff (IFAE, Barcelona)

Pol Forn-Díaz (IFAE, Barcelona)

Ioan M. Pop

An older example: post-apprentice in the baker's guild

MUSEUM DER
BROTKULTUR
ULM *1955

By the rules of the guild, before settling down and opening a shop, a young baker had to travel for several years to learn new recipes and techniques.

My initiation journey

Undergraduate at Babes-Bolyai University, Bachelor in Physics
(2002-2006)

My initiation journey

Research Internships at Paul Scherer Institute (PSI)
(2005 and 2006)

My initiation journey

Master and PhD, in CNRS and University of Grenoble
(2006-2011)

My initiation journey

Postdoctoral research in Yale University
(2011-2015)

Example of a “fluxonium” superconducting quantum bit

Persistent Current in Superconducting Nanorings

K. A. Matveev,¹ A. I. Larkin,^{2,3} and L. I. Glazman²

$$v = \frac{4}{\sqrt{\pi}} (E_J^3 E_C)^{1/4} \exp\left(-8\sqrt{\frac{E_J}{E_C}}\right)$$

Fluxonium with granular Aluminum (grAl) and one SIS phase-slip junction

About 100 JJ typically required for a fluxonium qubit

Now how about a 99% discount?

The Gralmonium Circuit & the GrAl Nano-Junction

$$H = \frac{1}{2} E_L \left(\varphi - 2\pi \frac{\Phi_{\text{ext}}}{\Phi_0} \right)^2 + 4E_C^\Sigma n^2 - E_J \cos \varphi$$

Achilles' heel for SC hardware: Decoherence

- Surface spins
- Dangling bonds
- Surface charges
- Parasitic uW modes
- Stray photons
- Stray phonons
- Trapped magnetic field
- Broken Cooper pairs
- etc.
